OPEN SOURCE INTELLIGENCE (OSINT), COMPLIANCE, AND FINANCIAL FRAUD ANALYSIS REPORT

EXECUTIVE SUMMARY AND METHODOLOGICAL SCOPE

*This report consolidates the technical and forensic analysis of a larceny by trickery and social engineering fraud operation (**Art. 171, § 2-A of the Brazilian Penal Code**) suffered by victim **M.A.A.B.**. The work adopts the Parallel Construction methodology, relying exclusively on overt open-source intelligence (**OSINT**) data, public corporate registration records, telecommunication metadata, and the decoding of payment artifacts. In strict compliance with the guidelines of the **General Data Protection Law** (**LGPD - Law 13.709/2018**) and international ethics standards in fraud investigation (**ACFE** and **INTERPOL**), the identification of strict natural persons (potential intermediaries without corporate ties) was handled via pseudonymization using initials. On the other hand, all public corporate data remained exposed (CNPJs [National Registry of Legal Entities], active trade names of MEIs [Individual Microentrepreneurs], CNAEs [National Classification of Economic Activities], commercial addresses, declarable emails, business phone numbers, transaction hashes, and digital infrastructure identifiers).*

1. SOCIAL ENGINEERING VECTORS / PRETEXTING (DIGITAL INFRASTRUCTURE)

The attack architecture employed advanced pretexting techniques (simulation of judicial and legal authority) to induce the victim into coercive error:

- **Communication Channel and Mobile Telephony: +55 1198299-5191**. A query performed on the public platform of **ABR Telecom** (Entity Administering Number Portability in Brazil) confirmed an active link with the provider **TIM S/A.** A profile was used under the fictitious name "***Dra. Aline Gorga***" (*Criminal sock puppet*), simulating legal representation in a real lawsuit that the victim had filed against the company **Leroy Merlin**.

- **Videoconferencing Environment and Legal Pretext:**
  Platform:
  Google Meet: *https://meet.google.com/frm-uwoi-vjm, room code frm-uwoi-vjm*). The ***attackers*** *simulated* a real-time hearing with the alleged participation of a '*public prosecutor*' and representatives of the **Superior Court of Justice**. Under the pretext of '*releasing funds won in court*,' the victim was coerced into presenting a '*declaration of values*' to avoid an arbitrary **30% income tax withholding**. To lend credibility to the narrative, fraudsters employ **OSINT** techniques on court portals (e.g., ***Jusbrasil***) combined with data from ***illicit leaks***. The legal jargon and the simulated environment act as distraction elements, designed solely to ***induce the victim*** to execute the financial transfer ***under coercion***.

- **Inducement of Financial Contribution:**
  Under *remote* guidance from the fraudsters in the chat, the victim contracted a bank loan in the amount of **R$ 50,000.00** with **Banco Itaú S.A.**. From this amount, the immediate opening and transfer of **R$ 14,889.97** (initially declared in the incident report as approximately **R$ 15,000.00**) was demanded to an account under the victim's same ownership maintained on the **PicPay** application.

2. ANALYSIS OF ANOMALIES IN CORPORATE REGISTRIES AND KYB FAILURES

The investigation using *open sources* across the registries of **Redesim / Receita Federal Federal Revenue Service** revealed the overt use of shell companies classified as **Individual Microentrepreneurs** (**MEI**) to support the receiving ecosystem.

A. The Critical Case of CNPJ 69.***.582/0001-95 (Primary Shell Company)

- **Corporate Name:** 69.***.582 T. M. F.
- **Opening Date: 09/17/2026** (company ***created*** just **5 days** prior to the attack that occurred on **09/22/2026**).
- Registered with the amount of **R$ 90,000,000.00** (ninety million BRL). This constitutes a ***severe*** mathematical and regulatory ***anomaly***, given that the legal cap for ***annual revenue*** for an **MEI** in Brazil is **R$ 81,000.00**. This discrepancy demonstrates the total absence of validation filters and consistency checks (**KYB**) on the Portal do Empreendedor and the Redesim platform at the *time of registration*.
- Registered at **Travessa A***, **No. 100,000**, Neighborhood **Parque Residencial Cocaia**, São Paulo/SP. Geolocation and road network checks confirm that it is a *peripheral* residential street in the **Grajaú** district with a total length of only ***110 to 130 meters***, making **building number 100,000** a **physically non-existent** address artificially created to bypass street validation controls.
- Classified under **Primary CNAE** 80.11-1-02 (*Guard dog training services*) and **Secondary CNAE** 53.10-5-02 (*Activities of National Post Office franchisees*). The selection of these activities by fraud actors stems from the fact that they ***do not require prior inspections*** by the Fire Department, environmental licenses, or complex sanitary permits, ***facilitating the instantaneous granting*** of a **CNPJ** *registration without* **in-person verification**.

- **Digital Trace and Operator Footprint (Digital Footprinting):**
  Declared Email**:** *gs********s@gmail.com*. Analysis of the digital footprint via **OSINT** tools (***Epieos*** and ***Holehe*** **/ cross-referencing platforms for user/email data**) isolated the ***immutable code*** - Google GAIA **ID 115490095041130798647**, with active records and accounts identified on the **Spotify** platform and on **Microsoft Live** platforms (gaming section). The discrepancy between the email naming pattern (**g********s**) and the name of the **MEI** (T. M. F.) indicates centralized management by an external operator. **Phone: (11) 99373-9387**, a *prepaid* mobile line belonging to the provider **Vivo S.A.**.

B. Mapping Other CNPJs Belonging to the Network

• CNPJ 53.*.530/0001-22 (53.***.530 R. R. dos R. M. de M.):**
Opening Date: 02/17/2024 (Itanhaém/SP) |**CNAE:** 85.99-6-04 **(Professional development training),** once again an activity that **does not require in-depth documentation or prior on-site regulatory inspections.**

Declared Address: Av. F*** F***a, 2218, Itanhaém/SP. Cadastral and geographical inspection confirms that the location refers to a **vacant lot / empty plot,** characterizing the classic use of a **ghost address.**
Contacts: Email t***************l@gmail.com and phone (13) 9****-***9 (TIM S/A).

• CNPJ 53.*.750/0001-70 (53.***.750 S. D. G.):**
Opening Date: 01/15/2024 (São Vicente/SP) **|CNAE:** 56.12-1-00 **(Ambulatory food services).**
Declared Address: Av. J*** de F***, 238, Vila V***á, São Vicente/SP. The physical location houses the Centro de Equoterapia C*******m [Equine Therapy Center], an establishment **without any functional or operational relationship with the MEI in question.**

• CNPJ 68.*.221/0001-58 (68.***.221 R. F. J.):**
Flash Registration and Closure: Created on **09/04/2026** and voluntarily closed on **09/25/2026,** with a total lifespan of **only 21 days.**
The registration used the official **email d****059@gmail.com.** The **same email was used** to register **CNPJ 69.***.246/0001-50 (69.***.246 D. A. A.),** created on **09/11/2026** in São Vicente/SP, proving a direct operational link and serial opening of shell companies.

3. REVERSE ENGINEERING OF FINANCIAL AND PAYMENT ELEMENTS

The extraction of metadata contained in message screens and receipts allowed the technical decoding of keys, payment slips, and Pix payloads used in the siphon attempt:

ARTIFACT TYPE	EXTRACTED RAW DATA	TECHNICAL / STRUCTURAL ANALYSIS
Random Pix Key (EVP/UUID)	a9ab94ec-f390-45b2-9737-dbbe04578e29	Temporary key to obfuscate the direct beneficiary (**PicPay**) S. D. G. - **Natural Person**
EMV BR Code Payload (Pix 1)	...bcb.pix011119979885777...530398654079999.005802BR5903SAM6003SAO62070503***63047F10	**Tag 26:** Mobile key (19) 97988-5777 A. M. S. (Beneficiary Natural Person) Partial CPF ***.798.857-** **Tag 54:** R$ 9,999.00 **Tag 59/60:** SAM / SAO

EMV BR Code Payload (Pix 3)	...bcb.pix01114691835820001955204000053039865407500 0.005802BR5904GTWA6004FZPH62180514T3XIJP...	**Tag 26:** CNPJ 69.***.582/0001-95 **Tag 54:** R$ 7.500,00 **Tag 59/60:** GTWA / FZPH
Digitizable Line / FEBRABAN Barcode	26090506832108283673195800000002115840000499999	**Bank:** 260 (Nu Pagamentos / Nubank) **Amount:** R$ 4,999.99 **Due Date:** 09/29/2026

4. FINANCIAL TYPOLOGY, STRUCTURING (SMURFING), AND CONTAINMENT MEASURES

The flow of funds executed by the attackers demonstrated the application of transaction splitting patterns (***Structuring / Smurfing***) combined with the use of pass-through accounts (*Pass-through Accounts*):

ITAÚ CHECKING ACCOUNT (Victim M.A.A.B.) *Loan Credit:* **R$ 50,000.00** *(8 Split Transfers in 6 Minutes: 16:00 to 16:06)* ➔ Total: **R$ 14,889.97**

PICPAY INTERMEDIARY ACCOUNT (Same Ownership M.A.A.B. / Omnibus Account / Fintech Account)
Siphoning Attempt via Pix / Payment Slip ➔ (Stone, Caixa, Nubank, PicPay, Facebook) **ALL BLOCKED AND CANCELLED**

CENTRAL BANK CAUTIONARY HOLD (MED): *Anti-fraud Intervention at 18:30* ➔ **Full Refund of the R$ 14,889.97**

High-Velocity Splitting (Velocity & Smurfing): On 09/22/2026, between 16:00 and 16:06, **8 split transfers** were executed from the victim's **Itaú** account to her ***own account*** at **PicPay** in the following amounts:

- *1st batch*
  16:00: +R$ 100,00 | 16:01: +R$ 999,99 | 16:02: +R$ 2.499,99 | 16:03: +R$ 2.500,00
- *2nd batch*
  16:04: +R$ 2.000,00 | 16:05: +R$ 2.999,99 | 16:05: +R$ 2.900,00 | 16:06: +R$ 990,00

  The *division* of the total amount into *smaller fractions* (avoiding round amounts above **R$ 3,000.00** or **R$ 5,000.00**) seeks to ***evade automated rules*** of *Transaction Monitoring* and ***prevent immediate precautionary blocks*** at the origin account.

From the intermediary account, fraudsters attempted to ***scatter*** the balance to ***multiple destination institutions***, complicating the **MED** from **BACEN [Central Bank of Brazil]** and reverse logistics due to technical limitations following funds dispersion:

Stone IP S.A. *(69.***.582 T. M. F.): Attempts of* ***R$ 5,000.00*** *(16:24) and* ***R$ 5,000.00*** *(16:26).*

Caixa Econômica Federal *(A.M.S.): Attempts of* ***R$ 9,000.00*** *(16:17) and* ***R$ 3,999.99*** *(16:48).*

Nu Pagamentos S.A. *(68.977.221 R. F. J.): Payment slip of* ***R$ 4,999.99*** *(16:42).*

PicPay *(53.***.750 S. D. G.): Attempts of* ***R$ 100.00*** *(16:32) and* ***R$ 999.99*** *(16:29).*

Stone IP S.A. *(53.***.530 R. R. dos R. M. de M.): Attempt of* ***R$ 5,000.00*** *(17:12).*

Facebook Serviços Online Ltda. *(CNPJ 13.***.016/0001-17): Attempt of* ***R$ 4,999.00*** *(16:58).*

All generated receipts indicate the definitive status of "***Pix cancelled***" or "***Payment cancelled***". At 18:30 on the same day, monitoring holds from **PicPay** retained the balance and applied the **Special Return Mechanism (MED - BCB Resolution No. 103/2021**), debiting the ***8 entries under security review***. Thus, the funds were preserved, and direct financial damage to recipient accounts was negated, keeping the fraud at the attempted stage.

5. TECHNICAL MATRIX OF AGENTS AND PASS-THROUGH ACCOUNTS

The forensic consolidation of accounts involved in the siphoning attempt and their public source data is presented below:

IDENTITY	IDENTIFIER	DESTINATION INSTITUTION	REGISTRATION / RECORD	ANOMALY AND OSINT VECTOR
T.M. F. *MEI Op. 1*	CNPJ 69.***.582/0001-95	Stone IP S.A.	**Opening:** 09/17/2026 **CNAE:** 80.11-1-02	Share capital of R$ 90 million; *Fictitious* address (No. 100,000).
A. M. S. *Beneficiary Natural Person*	Partial CPF ***.798.857-**	Caixa Econômica Federal	**Origin:** 7th Tax Region (RJ/ES - digit 7)	**EMV Decoding:** Revealed mobile key (19) 97988-5777.

R. R.dos R. M. M. *MEI Op. 3*	CNPJ 53.***.530/0001-22	Stone IP S.A.	**Opening:** 02/17/2024 **CNAE:** 85.99-6-04	Address in empty plot / vacant lot in Itanhaém/SP.
S. D. G. *MEI Operator 4*	CNPJ 53.***.750/0001-70	PicPay	**Opening:** 01/15/2024 **CNAE:** 56.12-1-00	Registered address physically houses an Equine Therapy Center.
R. F. J. *MEI Op. 5*	CNPJ 68.***.221/0001-58	Nu Pagamentos S.A. (Nubank)	**Opened:** 09/04/2026 **Closed:** 09/25/2026	Flash closure in 21 days; use of common email d**********o59...

6. FINAL CONSIDERATIONS AND RISK MITIGATION RECOMMENDATIONS (AML/KYB)

The case study demonstrates that the ***ease of automation in business creation*** and onboarding for ***digital accounts*** is exploited to build layering structures (***layering***). To mitigate such vulnerabilities in the financial and corporate ecosystems, the following institutional measures are recommended:

1. Enhancement of KYB Controls in Redesim / Portal do Empreendedor:

- Implementation of ***automated algorithms*** **for consistency checks between Social Capital and MEI Classification**, preventing the registration of sole proprietorships with extreme amounts (e.g., R$ 90 million).
- Mandatory integration with municipal ***cartographic databases*** for automatic verification of street existence and maximum actual numbering, blocking the insertion of fictitious building numbers (e.g., No. 100,000 on 130-meter streets).

2. Enhancement of Risk Engines in Fintech Onboarding:

- Application of *cross-referencing routines for declared emails* of **CNPJ**: accounts opened under a corporate entity displaying **registration emails** with **names or initials glaringly divergent** from the **corporate name or ownership structure** must undergo enhanced biometric and documentary verification (**Enhanced KYC/KYB**) prior to releasing Pix keys and issuing payment slips.
- ***Precautionary block*** on opening corporate accounts for **MEIs** recently created that share email addresses with *other* **CNPJs** opened and closed within ***short time intervals***.

3. Evolution of Transaction Monitoring Rules and BCB Regulations:

- **Calibration of *velocity*** and *behavioral analytics* alerts: newly opened accounts without prior transaction history receiving atypical flows followed by multiple split high-frequency transfers (minutes apart) must undergo an **immediate cautionary block of up to 72 hours** (as provided under **BCB Resolution No. 147/2021**).
- Continuous maintenance and strengthening of integration protocols via the Special Return Mechanism (**MED**), whose timely action proved to be the sole effective barrier capable of neutralizing financial siphoning in sophisticated social engineering schemes.

About the Author

André Almeida
Civil Police Investigator of the State of São Paulo (PCSP) for 10 years, focusing on criminal investigation, police intelligence, and Open Source Intelligence (OSINT) techniques. He is a Law student at the Universidade Cidade de São Paulo (UNICID) and holds a Bachelor's degree in Social Communication with a concentration in Advertising and Marketing from the Universidade São Judas Tadeu (USJT).
